EDUCATION

De La Salle University — Manila 2024 – 2028 (Expected)
B.S. Computer Science, Major in Software Technology
CGPA: 3.84 / 4.00 · 1st Honor Dean's Lister

ENGINEERING EXPERIENCE

Slottle — QA / Engineering Contributor Aug 2026 – Present
Browser extension · React · TypeScript · Tailwind CSS · Vite · Bun · WebExtensions API · Live site

- Performed acceptance-criteria-driven QA for a DLSU-focused browser extension that retrieves course offerings and generates conflict-free schedules across Chrome and Firefox.
- Reproduced, documented, and tracked feature, bug, and UI/UX issues through a GitHub workflow, validating fixes against predefined acceptance criteria; the extension reached **1,000+ downloads** across both web stores.

BoomBox Gym — QA & Assistant Frontend Developer Jun 2026 – Present
CSSWENG course project · React · TypeScript · Tailwind CSS · shadcn/ui · TanStack Table

- Performed frontend QA for a client-facing gym management application supporting member, coach, and administrative workflows; created reusable GitHub issue templates and suggested development workflows.
- Refactored the frontend from an unstructured codebase into a **Feature-Sliced Design** architecture to improve separation of concerns and maintainability.

NATS (LABLABAI Hackathon) — Frontend Developer May 2026
Notes-to-Action Task Synthesizer · React · TypeScript

- Developed and shaped the React/TypeScript frontend of an AI-powered application that transforms meeting notes and transcripts into structured engineering tasks and repository-ready GitHub issues.
- Proposed the GitHub issue-generation workflow feature, influenced application flow and component design, introduced persisted client-side state, and refined a responsive dark-mode-first interface during a two-day implementation sprint.

SELECTED PROJECTS

KaraokeDex — Song Code Search for Platinum Karaoke
Independent project · SvelteKit · TypeScript · Tailwind CSS · SQLite · Zod · GitHub · Live site

- Independently designed and developed a phone-first, open-source search app as an alternative to outdated printed songbooks and poorly designed song list apps.
- Built a parsing pipeline that turns 393 published PDF songlists into static catalogs for 10 machine lines and **80,000+ song listings**, with all search running on the device in a web worker.

Nockr — Academic GPA, GWA & Honors Tracker Application
Independent project · SvelteKit · TypeScript · Tailwind CSS · Zod · GitHub · Live site

- Independently designed and developed a university-agnostic application for tracking grades, setting GPA goals, projecting grade trajectories, and planning future terms.
- Evolved a personal grade-image generator into an academic planning tool with configurable grading policies, presets for four major Philippine universities, and GPA/CGPA, honors, and unit-planning logic.

Wi-Fi Evolution — Interactive Wi-Fi Visualization
DLSU course project · React · MDX · Astro

- Served as primary designer and developer, creating the project's React components and authoring the Wi-Fi Evolution MDX page for an interactive educational exhibit.

Facebook GraphQL Interceptor
Independent project · Python · Playwright · asyncio · GitHub

- Independently developed a browser automation tool that intercepts Facebook GraphQL responses to extract exact engagement metrics unavailable through truncated DOM content.
- Built asynchronous workflows for collecting structured engagement and comment data in response to a research requirement where conventional DOM-based scraping was insufficient.

EXTRA-CURRICULAR & ORGANIZATIONS

Peer Tutor Society (PTS) — Peer Tutor Jul 2026 – Present

- Tutor computer-science-related mathematics courses and provide peer-led academic support for fellow students.

CATCH 2T28 — Executive for Finance Feb 2025 – Sep 2025

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C, C++, Java, Rust
Frontend: React, SvelteKit, Vue.js, HTML/CSS, Tailwind CSS
Tools: Git, GitHub, Vite, Bun, Playwright, MySQL, Zod
